EDUCATION

SRMCEM, Lucknow

Btech in Electronics And
Communications

09/2021 – 06/2025

City Montessori School, Lucknow

12th – PCM + Psychology

04/2020 – 07/2021

LINKS

SKILLS

Programming

Python | Java | C | HTML | CSS |
JavaScript | SQL

Robotics

Arduino | Embedded Systems

MENTORSHIP

GDSC SRMCEM – Coordinator

08/2023 – 06/2024

Conducted tech events and
mentorship on cloud, Android, and
GenAI for 250+ students, leading to
a 74% rise in registrations.

SRMCEM ROBOTICS CLUB (Formerly GROBOTS) – HOD

09/2023 – 06/2025

Facilitated robotics learning for 50+
students and organized events to
boost skills and collaboration.

EXPERIENCE

Embedded System Intern

Blue Heart Lab | 10/2022 – 12/2022

- Developed and programmed line-following and remote-controlled robots, enhancing their performance and responsiveness for various applications.
- Collaborated effectively in a team environment, providing support and guidance to peers, ensuring timely completion of tasks and daily deadlines.
- Outlined and configured routines and parameters for multiple robotic systems, improving their operational efficiency and reliability.

Research Intern

Predulive Labs | 06/2024 – 08/2024

- Conducted comprehensive research on cutting-edge drone and AI technologies, meticulously gathering, analyzing, and synthesizing data to support critical project developments.
- Played a pivotal role in the design and launch of the company's website, while also crafting and delivering high-quality, detailed presentations for webinars and training sessions.
- Compiled and distributed extensive content, significantly enhancing the efficiency of information sharing and collaboration within the team, leading to improved project outcomes.

PROJECTS

Object Detection

HTML, CSS, JavaScript

- Led development of an object detection program using CSS, HTML, and JavaScript to identify objects in real-time through the user's camera
- Implemented a confidence scoring system to provide a percentage-based accuracy measure for object identification, enhancing user trust in the program's predictions.
- Optimized the program's performance to ensure efficient and accurate object detection, improving user experience and application reliability.

Smart River Cleaning Bot

Python, Embedded Systems, Mechanical Design

- A semi-autonomous robot designed to collect floating solid waste from river surfaces using a conveyor mechanism and a 3D robotic arm for hard-to-reach areas.
- Utilizes a YOLO-based object detection model with an onboard camera to identify waste in real-time, enhancing collection accuracy and responsiveness.
- Equipped with sensors like pH meters and GPS modules to continuously monitor water quality and location, supporting both environmental data collection and operational efficiency.
